Figure 6

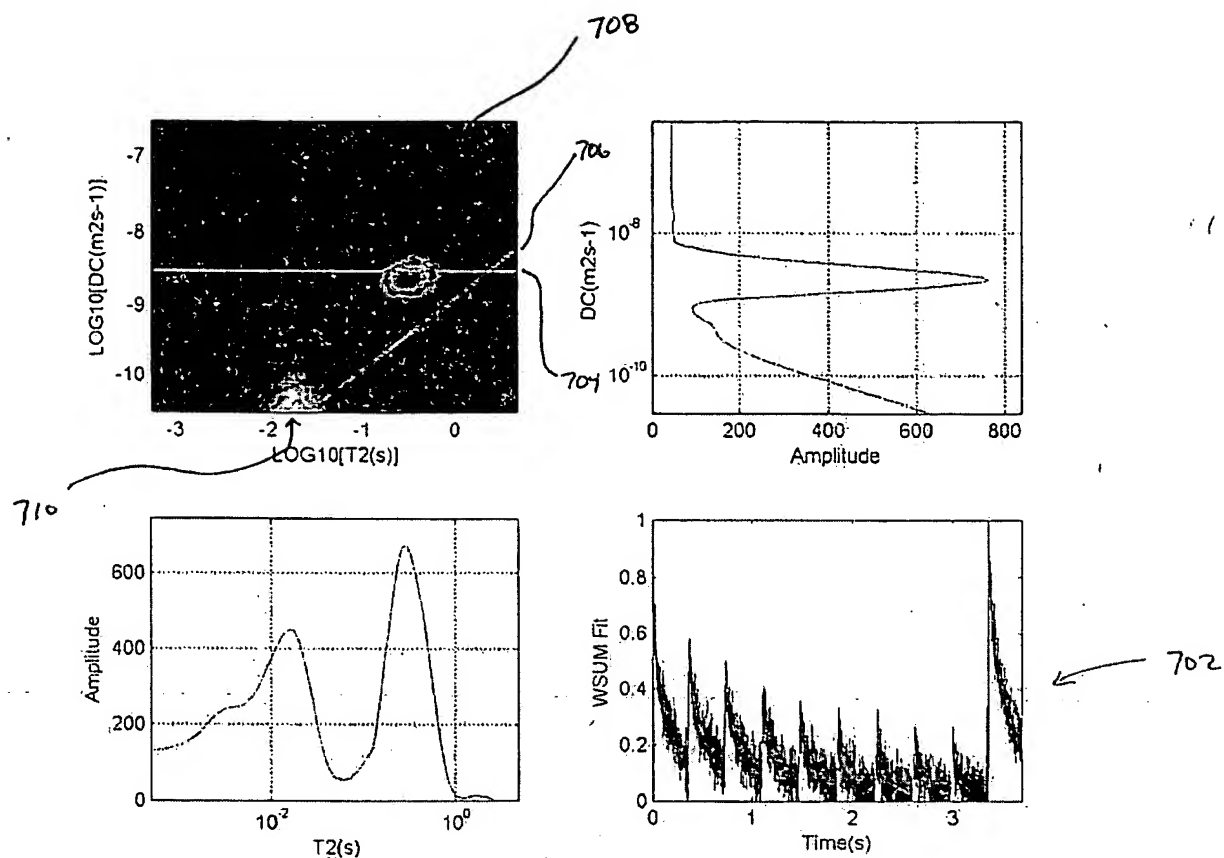

Figure 13. MRX Diffusion Editing Example (Indiana RS2000). Results of 2-dimensional inversion of diffusion editing data acquired by MRX in oil-bearing sandstone formation. Top left is the  $\text{T}2$ - $D$  map. Overlaying are lines for water (horizontal line) and dead oil (faint diagonal line) responses. Lower left is the integrated  $\text{T}2$  distribution (red) compared with the input distribution (black). Upper right is the integrated  $D$  distribution (red) compared with the input distribution (black). Lower right shows the input echo data (black). Also shown (faint red lines) are the normalized window-sum fits (red) plotted on the same time scale.
